Jasper PIM // Product Features

Automated Promotional Pricing

Set-and-forget price scheduling allows you to prep and manage multiple sales promotional events wholly within the PIM. Maintain regular selling prices on products and schedule a future promotional price that will automatically update to your sites on the specified day. When the promotion is over, products automatically revert to their regular pricing.

- Ability to set date delimited prices on products
- Maintain a "regular price" while allowing for a scheduled, promotional price to be pushed to channels; prices revert when promotion ends
- Schedule price changes for future dates (to the minute) for seamless updates to your site.

Import/Export Capability

If you need to import new product skus or make updates to multiple fields across your whole catalog to introduce a new data point, the Jasper PIM Import/Export Tool has you covered. Data security and integrity are paramount, so CSVs are validated multiple times and in multiple ways to ensure there is no chance of data corruption when importing.

- Configurable profiles save time for repeated tasks
- Round trip editing
- Header column, row and cell validation passes for data integrity
- Downloadable error reports

Custom Attribute Management

Store all your custom product data inside the PIM using attributes. Organize them in to assignable sets and save time enriching your products. Choose from a variety of data formats and publication options.

- Custom product data points housed in the PIM
- Multiple data formats (text, date, selectbox, multi-select, markdown, & JSON)
- Assigned to products individually or in sets
- Attributes can be set to internal use or published to channels
- Segment, organize and merchandise easily with advanced search by attribute value
- Customize the user workflows with Display Groups

Complete Category Management

Proper categorization of your products is essential for a smooth customer buying experience. Jasper PIM houses full category management tools allowing for independent category schema for each publication channel, hierarchical structures and full SEO data including image, description and metadata.

- Nested/Hierarchical categories supported
- Store and publish category image, description, SEO data
- Channel specific schema using multiple root level categories
- Tree view lists categories in a hierarchy view
- Grid view displays channels & product counts
- Control category visibility on published channels which is useful for repeatable promotional events*

*behavior depends on ecommerce platform

Activity Tracking

See full history of product activity by user, action and time. Jasper PIM logs each save on a product and automatically shows the last five touches to each product in the activity log.

From the PIM dashboard, access the full activity log across all products, with the ability to search for specific users, actions or products.

- Track product changes by user
- Easily determine if another teammate has been working on the same product
- Empowers accuracy and accountability amongst product management staff

Bundled Product Support

Merchandise your products into bundles inside Jasper PIM. Sell complete kits of products as well as their component products at the same time.*

- Bundle products act as complete product records within PIM (full merchandising capabilities)
- Bundle components act as complete products in PIM and maintain ability to publish and sell separately and inside the bundle
- Extend ecommerce platform functionality for bundles

*bundled product behavior depends on eCommerce platform

Parent/Child or “Variant” Products

A smooth customer experience is vital to a successful ecommerce website. Jasper PIM allows you to set product options to create parent/child relationships, also known as variant products. Keep like products grouped on a single product page with purchasable options. Store separate assets, pricing and inventory on children. Cascade data bi-directionally depending on available data.

- Create parent/child relationships for products inside the PIM
- Create child products directly in the PIM or attach an existing product.
- Children can have separate assets, pricing, inventory
- Parent data can be overridden on the child

Assets	Pricing	Inventory	Children	Relations	Channels
Options		Saleable	PCSID	SKU	
Color Execution : Black Yellow		0	8		CYPI
Color Execution : Blue Red		0	9		CYPI
Color Execution : Silver Green		0	10		CYPI
Color Execution : Rose Gold		0	11		CYPI

Custom Product Relationships

Create and manage custom product relationships in Jasper PIM. Associate products with one another using multiple relationship directionalities. Use one:one relationships to create a “see newer version” of a product. Use one:many relationships to establish a set upsell opportunities for a given product. Use many:many relationships to cross sell compatible products.

- Create and manage custom product relationships
- Use for cross sell, upsell, “see newer version” and more
- Support for multiple relationship directionalities
 - one-to-one (product substitutions)
 - one-to-many (product works with, upsell)
 - many-to-many (also bought, also viewed, cross sell)
- Add attributes to product relations such as bundle quantities and skus

Generic Entities

Jasper PIM supports additional data types beyond products in the form of generic entities that can be related to products and have attribute sets assigned to them.

Generic entities can be used to house both internal or external custom data. Internal data (i.e. data that is never published to any given store or marketplace) could include fields such as: product distributor information, third party reseller pricing, technical specifications, private notes, etc.

- Compounding Custom Attributes / Facets
- Create custom data objects in the PIM
- Relate them to products and assign attributes
- Endless uses include: brand ambassadors, book authors, product distributors, etc.

Multiple Product Versions

Take the pain out of omni-channel selling with Versions in Jasper PIM. Curate multiple versions of product content and assign specific publication channels to each version. Publish different content to each storefront and in different languages from the same master product data housed in Jasper PIM.

- Easily tailor product data for global expansion
- Channel specific version publication control
- Store multiple names, descriptions, marketing data and attributes all on a single product page
- Use versions for language localization
- Connect each “version” to a publication channel or channels to manage all storefronts from a single source of truth

Digital Asset Management (DAM)

Store a wide range of digital assets inside Jasper PIM. Set the product thumbnail image and control image publication order. Set individual image titles and alt text.

- Set assets to public to publish or be referenced by URL
- Set assets to private for internal PIM use only
- Control individual asset title and alt text
- Upload non-image assets including pdf, doc and CAD files

Multi-Source Inventory

Store multiple inventory records inside Jasper PIM organize by location, bin and source. Use on hold quantities to specify inventory hold backs or show reserved inventory levels. Integrate with external sources or update manually.

- Update inventory manually, or from an external source such as an ERP connection via API
- Natively supports multiple sources of inventory including warehouse, source, and bin
- Inventory hold back capability to prevent overselling
- Synchronize inventory publication to all channels and systems

Price List **Support**

Regardless of whether your enterprise publishes to B2B, B2C, or both storefronts or marketplaces, Jasper PIM allows you **total pricing control** with a sophisticated pricing tool.

Store multiple price records on a single product and tie individual records to a specific publication channel. Sell the same product at different prices using the same inventory across multiple outbound publication channels.

- Sell the same product to multiple storefronts or marketplaces at different prices
- Store multiple active price records on a product
- 100% pricing and inventory visibility in the PIM
- Easily maintain B2B and B2C price records

Effective Sell Price US Production: **\$299.99**

Effective Sell Price Canada Production: **399.99**

Effective Sell Price Canada French Production: **399.99**

Effective Sell Price Europe Production: **299.99**

Effective Sell Price UK Production: **269.99**

Advanced Search

Time is money is the age-old expression, and is especially true of marketing and merchandising. The more time spent organizing your products into groupings for marketing campaigns, the more you have to sell to make up the overhead. Jasper PIM offers a powerful advanced search feature that allows you to quickly and easily drill down to the exact set of products you wish to market and then perform batch actions on those products. Setup campaigns in a fraction of the time, saving you money.

- Filter by Brand, Category, Featured Status, Publication Status, and Product Type
- Search Within, Not Within, Equals and Not Equals for Tags and all Custom Attributes
- Search Number Ranges or Number Values with Operators on Prices, Webids, Weight and Inventory
- Sort Results by ID or Price
- Save Searches For Repeated Use
